

Guaranteed Safety

- Flexibility according to customer requirements
- Full compliance with EU lift standards
 - Easy installation
 - Automatic operation
- Remote Monitoring System Support
 - Worldwide use

2N Lift Easy Talk Guaranteed Safety

2N Lift Easy Talk enables a comfortable bidirectional communication between persons in a lift cabin and a hotline in the case of emergency. For connection with the hotline, just press the ALARM button on the control panel in the lift cabin and the call will be established automatically via a PSTN line. Thanks to the integrated voice function, the person in the lift is informed that the emergency organization has been notified. The equipment can be controlled and programmed remotely via a telephone line as well. In case there is no PSTN line available, it is possible to connect Lift Easy Talk to the GSM gateway and call the service centre through the GSM network.

2N Lift Easy Talk

Features:

- Fully automatic operation
- Full HandsFree function
- Automatic re-dialling of up to 6 phone numbers
- Powered from the phone line – no power supply and battery needed
- With an extension module it is possible to record own messages of up to 30 seconds each
- Message, "Wait please, call is in progress" included in the basic module
- Switch modules allow to control up to 3 additional devices
- Remote programming includes voice adjustment parameters, no local service needed
- Automatic "Test call" every 3 days
- Optical status indication – two LEDs
- Protection against accidental and pointless initiation of alarm call
- Verified quality
- Worldwide use, easy installation

Floor Annunciator

The 2N Floor Annunciator is a device designed to report floor numbers when the lift cabin stops. Some more information can be reported such as "The lift is overloaded", "The door is opening" or any other messages required by the customer. The messages may of course be recorded in more than one language. Configuration DIL switches on the device can handle 90% of installation needs. If needed, programming over a serial or parallel interface can be done as well. The program for easy configuration and message creation comes up with predefined voice messages in English, German, French and Russian languages.

Additional products

Lift Connect 1/4, 1/8

- Connection of up to 8 communication devices on 1 telephone line
- Machine room – lift car communication
- Battery back-up

Lift Call Connect

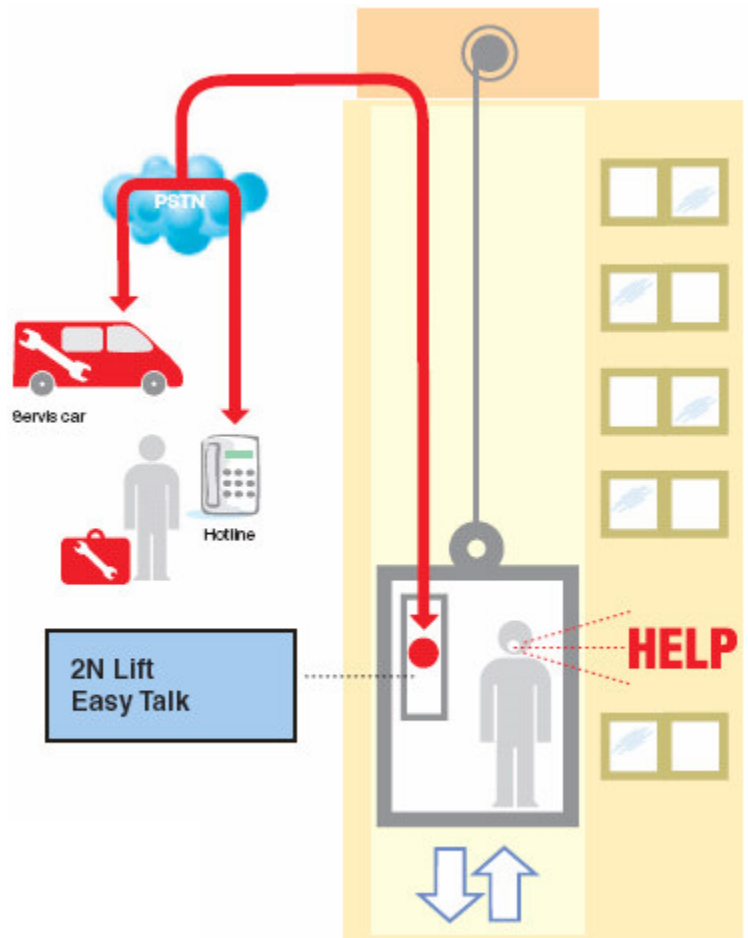

- Machine room – lift car communication
- Possible communication with the person locked in the cabin even during PSTN line breakdowns
 - Easier programming from the machine room

Remote Monitoring System

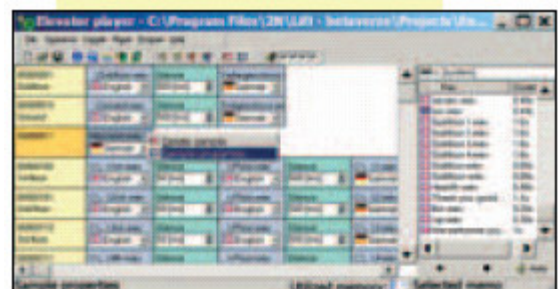

The 2N Contact Manager for Lifts is a powerful solution for monitoring lift communicator calls. This solution is built on data acquisition using the GSM gateways, PBX system and XAPI communication protocol.

The Remote Monitoring System provides:

- a solution for receiving of:
 - Alarm calls
 - Error messages
 - Periodical test calls
- Integrated database of companies, customers, regions, cities
- Recording of incoming calls
- Automatic operation

- Configuration software for Floor Annunciator
- Simple Windows application
 - Serial interface on each Floor Annunciator
 - Extended set of messages on a CD
 - Customer recorded messages can be used
 - And many more functions
