

## FEATURES AND CHARACTERISTICS

The JA-60F is an optional wireless keypad for the JA-60 or JA-65 series wireless control panel. It can operate the system in exactly the same way as the built-in keypad on the control panel and as the hard wired bus system keypad, JA-60E. The LED indicators, display and built-in buzzer indicate the alarm system's status.

Multiple keypads and RC-11 remote controllers can be used with a control panel (max. 8 totally). The keypad has a built in tamper sensor and it also checks the number of attempts to enter an access code (5 unsuccessful attempts will trigger a tamper alarm).

The keypad makes regular auto testing and reports its conditions regularly to the system for full supervision. The JA-60F keypad can be used for control panel programming as well. Being wireless, it can help an installer to monitor the system functions when performing a "walk" test.

## SPECIFICATION

	JA-60F
Power Supply	6 V - 4 AAA alkaline batteries (50 uA) or 12 V DC / 100 mA power adaptor
Battery Life Time	Typ. 1 year
Number of Keypads in a System	Max. 8 control devices
Working Range	Max. 40 m (open area)
Access Codes	Identical with control panel (1 +14)
Working Environment	Indoor use, -10 to +40 °C
Compliant	EN 50131-1 grade 2, EN 300220
