

# UV-SM

## FEATURES AND CHARACTERISTICS

- Since it is very hard and inconvenient that the inspector directly looks at the lower part of the vehicle with the naked eye, this equipment is ideally designed so that any person can easily detect the hazardous object hidden under the vehicle by inspecting the every nook and corner of the lower part in the narrow space through the mirror of the equipment.
- The tough ABS convex mirror provides a large field. The mirror offers a side field of view and the hinged handle can be lowered to ground level for maximum under vehicle penetration. A large convex mirror with fluorescent lighting mounted on castors for searching the underside of vehicles. A long reach handle is ideal for searching the under vehicles.
- The lightweight modular construction of the archway makes the unit easy to dismantle for convenient transportation.
- It is equipped with wheels so it can be moved freely.
- The handle can be folded so it is very convenient to keep it in custody.
- The easily purchasable batteries of 1.5VDC are used as power source.
- 1 Year Warranty
